SUMMARY

Product manager and former front-end engineer with **8 years across engineering, UX design and product**, 7 of them at Cisco. Builds AI platforms and developer ecosystems: turned a single Google Dialogflow integration into a multi-provider AI platform streaming **10M calls a year for 70 enterprise customers**, grew external developer API calls **180%**, and cut partner onboarding from **5+ months to under 2 weeks**. Builds AI agents to automate product work, and runs the operating rhythm and metrics that keep partners, engineering and leadership aligned.

EXPERIENCE

Product Manager II, CX AI Integrations Nov 2024 – Present
Cisco Systems, Webex Contact Center *McLean, VA*

- Incubated **Universal Harness** from a single Google Dialogflow integration into a multi-provider AI platform (Google, AWS, NVIDIA, OpenAI) across cloud and on-prem: **5+ partner integrations, 70 customer organizations, 10M calls a year** and **30K concurrent AI-streamed calls** in production.
- Wrote the PRDs for **Google Dialogflow CX, Customer Engagement Suite, OpenAI and AWS Bedrock** integrations and aligned **7 engineering teams** and 2 scrum teams on shared roadmaps, feature trade-offs and success metrics.
- Shipped three real-time developer APIs (Voice Virtual Agent over gRPC and WebSocket, Media Forking, Real-Time Transcript) for voice agents, transcription and analytics; added WebSocket support after developer feedback showed gRPC was slowing adoption.
- Raised agent logins inside CRMs **from 30% to 41%** across 45M+ calls a year by resetting the connector portfolio across 7 platforms (Salesforce, ServiceNow, Zendesk, Microsoft Dynamics, Epic, athenahealth and more) in 4 months: retired 2 of 5 legacy connectors based on adoption data and added MCP and A2A integration patterns.
- Presented the CRM connector strategy (which versions to keep or retire, healthcare vertical growth, and the AI roadmap) to Directors, VPs and the GM of Webex Contact Center; executives then presented it on stage at **WebexOne 2026**.
- Built the business case and a **usage-based AI SKU** (committed floor plus overage) with finance and billing; it set the pricing precedent for later Cisco AI products.
- Set the **operating rhythm** with AI vendors, CRM platforms and internal teams across engineering, UX, billing and finance, and product marketing; track trials, onboarding, MAU, QAU and API usage for every integration in **Power BI** and take key decisions to leadership through a metrics dashboard and executive deck.
- Took integrations and tools through **security and legal review**: certified Salesforce, ServiceNow and Google with Cisco's CASPR team, adapted Bring Your Own AI terms for public use, and got AI tools such as Gong approved for sales and support teams.
- Built and deployed **5 AI agents** with Codex and other tools that automate core product work, from drafting PRDs and syncing Jira to generating decks, prototypes and partner metrics reports.
- Mentored 2 product managers and currently lead the work of another PM.

Product Manager, Developer Experience Sep 2022 – Nov 2024
Cisco Systems, Webex Contact Center *Herndon, VA*

- Owned the Webex Contact Center developer portal (developer.webex-cx.com), then its Contact Center section after it merged into developer.webex.com. API calls from external developers grew **180% from 2022 to 2024**.
- Cut partner time to a working AI integration from **5+ months to under 2 weeks** with a common API contract, a DevNet reference app with simulators, test beds and recorded walkthroughs. Technical sales and developer teams reused the open-source connector pattern.
- Contact Center subject-matter expert for the **developer.webex.com AI assistant**: defined use cases, including data analytics and voice AI agents, that help developers find the right APIs and generate sample code.
- Led strategy for an extensible REST and gRPC API platform and a secure partner-integration framework spanning AI, CRM and automation, setting priorities across scrum teams with engineering, security, UX, pricing, sales and partners.

Lead Software Engineer Nov 2021 – Sep 2022
Cisco Systems, Webex Contact Center *Herndon, VA*

- Led a front-end team building a customer-facing workflow-visualization tool for contact centers in React and GraphQL; introduced Jest and Cypress test automation, code standards and Agile practices.

User Experience Designer Nov 2020 – Nov 2021
Cisco Systems, Webex Contact Center *Herndon, VA*

- Defined goals, scope and deliverables with product managers; ran user research and produced wireframes and prototypes for contact-center experiences.

Frontend Software Engineer Aug 2019 – Nov 2020
Cisco Systems, Webex Contact Center *Herndon, VA*

- Developed and maintained the front-end codebase and led the migration from AngularJS to Angular 8.

Teaching Assistant (part-time) Aug 2018 – Dec 2018
Rochester Institute of Technology *Rochester, NY*

- Supported the graduate course ISTE 645, Foundations of Web Technologies.

UI Developer Co-op (full-time) Jan 2018 – Jun 2018
Roc Photonics *Rochester, NY*

- Built instructional software for students learning to draw photonic circuits.

Student Web Developer (part-time) May 2017 – May 2019
Rochester Institute of Technology, Information Security Office *Rochester, NY*

- Redesigned the office website using contextual inquiry, personas and prototypes; built DSD Dojo, a gamified security-awareness course for RIT staff and faculty.

SPEAKING, PUBLICATIONS & OPEN SOURCE

- Speaker, **WebexOne 2024 & 2025** and **Cisco Live 2025 & 2026**: Bring Your Own AI architecture and partner implementation.
- Co-author, AWS Partner Network blog, “Cisco conversational AI powered by Amazon Lex”; author, Webex blog, “Supercharge Conversational IVR experiences with Amazon Lex.”
- Co-created the Bring Your Own Virtual Agent DevNet sample app and reusable connectors (GitHub).

EDUCATION

M.S., Human-Computer Interaction — Rochester Institute of Technology 2019
B.Tech., Electronics & Communication Engineering — SRM Institute of Science and Technology 2016

SKILLS

AI & agents: AI agents and agentic workflows, Codex, LLM integration, MCP, A2A, conversational and voice AI
Platforms & APIs: REST, gRPC, WebSockets, SDKs, webhooks, OAuth, developer portals and documentation
Product & analytics: roadmaps, PRDs, pricing, launches, operating rhythm, Power BI dashboards, adoption metrics
Design & engineering: user research, prototyping, Figma, React, TypeScript, GraphQL
